

If recent updates to your Java program or internet browsers have left you unable to connect and view the cameras or you are attempting to connect for the first time, please follow the steps listed below.

If you're not that familiar with toggling back and forth between windows, you may wish to print these instructions out before proceeding.

- 1> Click on the Java Software Required – Click [HERE](#) link and follow the instruction on the screen to download and install the latest version of Java (version 7 or later). If you have any difficulty, it may be necessary for you to go to your control panel and uninstall previous versions, including the previous versions of the Java Control Panel.
- 2> Next, you will need to provide an exception to the Java program for your associations DVRs.

A. Go to the windows control panel and select Java.

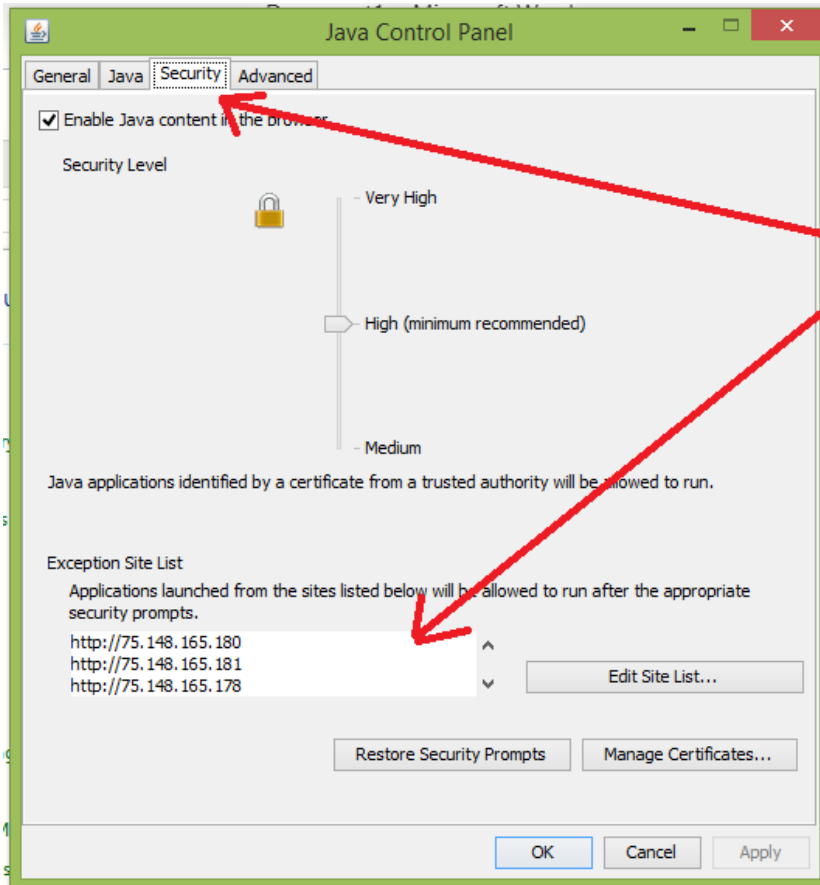

Change the View by: to Small Icons then select the Java Settings icon.

B. Add these 3 addresses to the exception list:

<http://75.148.165.178>

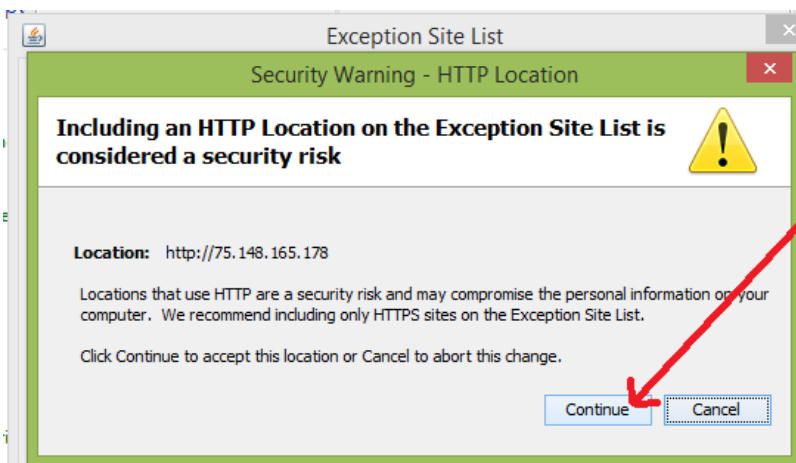

<http://75.148.165.180>

<http://75.148.165.181>

Once the Java Panel window is displayed, select the Security tab at the top of the window. Then edit the exception site list to include these three addresses.

ie: the three addresses of the 3 DVRs for the associations cameras.

These addresses are connected to DVRs and not computers. Therefore, any risk should be minimal.

Click "Continue" to add the addresses when prompted.

C. **You are now ready to connect to your cameras.** There's a good chance you will receive a pop up security warning when you access the cameras. Tell the computer you wish to trust this address and you wish to remember this instruction.

If you still require support to connect to the cameras, "Paid Support" is available from [PCS](#) at tiguex@swbell.net . Please do not contact the Association's Management Company for computer support.
